## FAQs

### »» WHAT IS PLUME?

Plume is a self-optimizing Adaptive WiFi system for the home. Plume replaces the WiFi on your router or modem to provide fast, reliable WiFi in every inch of your home.

With Plume's HomePass, you receive unparalleled controls over your guest and family's access to the internet.

Plume's AI Security provides robust protection of your devices as it continuously monitors them for suspicious activity.

### »» WHAT IS PLUME ADAPTIVE WIFI™?

Plume Adaptive WiFi puts the brains of your WiFi system in the cloud, using beautiful pods that you spread through your home to serve as links to the Internet. Plume adapts in real-time to the devices and applications that are running in your home, delivering perfect WiFi, adapted to every experience. Plume uses a patented WiFi allocation system, providing you the highest amount of bandwidth compared to any other home WiFi solution.

### »» WHAT IS HOMEPASS®?

Plume HomePass allows you to setup guest access for your network without needing a separate guest SSID. Better yet, each user will have their own personalized password and you can set up varying levels of access to your network based on three different zones. Plus, set up profiles for each member of the family, manage content access by person or device, and pause Internet access when you choose.

### »» WHAT IS AI SECURITY?

Plume AI Security allows you to filter content for kids, teenagers, and adults, block or approve specific websites, and prevent ads from crowding your browser. Advanced IoT Protection proactively monitors your smart home devices for security threats. Attacks on the smart home are increasingly common for devices like baby monitors, IP cameras, smart TVs, thermostats and even toys! Anomaly Detection protects by learning about a device's normal activity and distinguishing that from unusual behaviors that might indicate a threat.

### »» HOW DOES PLUME WORK?

Plume is powered by the cloud, which means it can adapt to real life in real-time, ensuring that every room and every device has reliable and fast connection now and into the future. Simply order the number of pods you need for your home, then connect a SuperPod to your modem, download the Plume app and go through the quick set up process.
