

Faster. Smarter. Fiber.

As of March 5, 2020, a security setting update from one of our vendors is causing email disruptions for customers with a **bvu.net** email domain. Webmail access through a browser has not been affected. If you have a **bvu.net** address and are having issues accessing your email on your phone or iPad, you'll need to update your email settings to restore your email service. Here's how:

1. Go under **Passwords and Accounts** from the settings menu and select your **PBB** email account.

2. Select your **PBB** email account as shown here:

Faster. Smarter. Fiber.

3. After selecting the email, change the incoming and outgoing (or SMTP) server to `secure.emailsrvr.com` as seen below in the image.
